# A small experiment in careful reading

## Overview

This document is a synthetic example, not a scientific paper.

## Methods

The fictional reader grouped eight annotations by color and reviewed them.

## Results

Eight color groups were represented in the demonstration.

## Limitations

No people were studied and no scientific conclusions can be drawn.

Try a highlight, a sticky note, and a paper-level child note in Zotero.

Use the reading guide to choose colors and tags. Keep your own comments separate.
